ABSTRACT OF THE DISCLOSURE

[0033]   Methods, systems, and products are disclosed for monitoring multiple tasks to fulfill a request originating from a web browser. One method communicates a progress page to the web browser. The progress page includes progress messages for each of the multiple tasks. The progress page also includes an Embedded Refresh Component that forces the web browser to periodically again request the progress page. When the multiple tasks are completed, a final progress page is communicated to the web browser, and the final progress page eliminates the Embedded Refresh Component.
